

WarpStock Europe 2018

What bitwise does ...

beside of Firefox

26-27 May 2018, Berlin (Germany)

What bitwise works does... beside of Firefox

bitwise works on the following projects

- InJoy 5 (New interface for Windows 10, new Qt-Based GUI)
- Samba Server 4.7 (Heimdal 7.5 already done)
- Apache OpenOffice 4.1.5 and 4.2.0
- CUPS

What bitwise works does... beside of Firefox

Projects that just gather momentum

-
- Qt5 (as the basis for many new applications)
- Java 7/8 (searching for developers)
- Next browser (will be based on Qt5)
- Samba 4.x

What bitwise works does... beside of Firefox

Libraries that we update regularly

- We updated or created 266 ports up to now
- About 80% of all ports are at the latest version
- Libraries are required to run bigger applications like Firefox, OpenOffice, CUPS successfully

What bitwise works does... beside of Firefox

Examples for important libraries, that you likely have never heard of

- Libtiff, jpeg-turbo – is required by
 - Firefox
 - Poppler (at least in part a library itself)
- Poppler – is required by
 - CUPS,
 - GhostScript
 - Qpdfview

What bitwise works does ... beside of Firefox

- Gettext

- Poppler
- Perl
- Python
- GCC

- Ncurses

- ClamAV
- SQLite
- WCD
- Heimdal
- ncFTP

What bitwise works does ... beside of Firefox

- All these libraries can be used universally and we provide them free of charge
 - Unlike “special” ports, linked statically to certain versions of certain applications
 - That is one of the reasons for the rpm/yum system
- Each update to a library fixes bugs in various applications
- That is the way your development units go
- Good software does not grow on trees
